**NEW**

# Introducing Destination Dispatching

Destination Dispatching is a new feature in Telematics Guru that enables simple **Transportation, Job, or Delivery Dispatching** to improve driver management, visibility and productivity.

## ■ Assign

Managers can quickly assign and send jobs or deliveries with addresses to drivers in Telematics Guru.
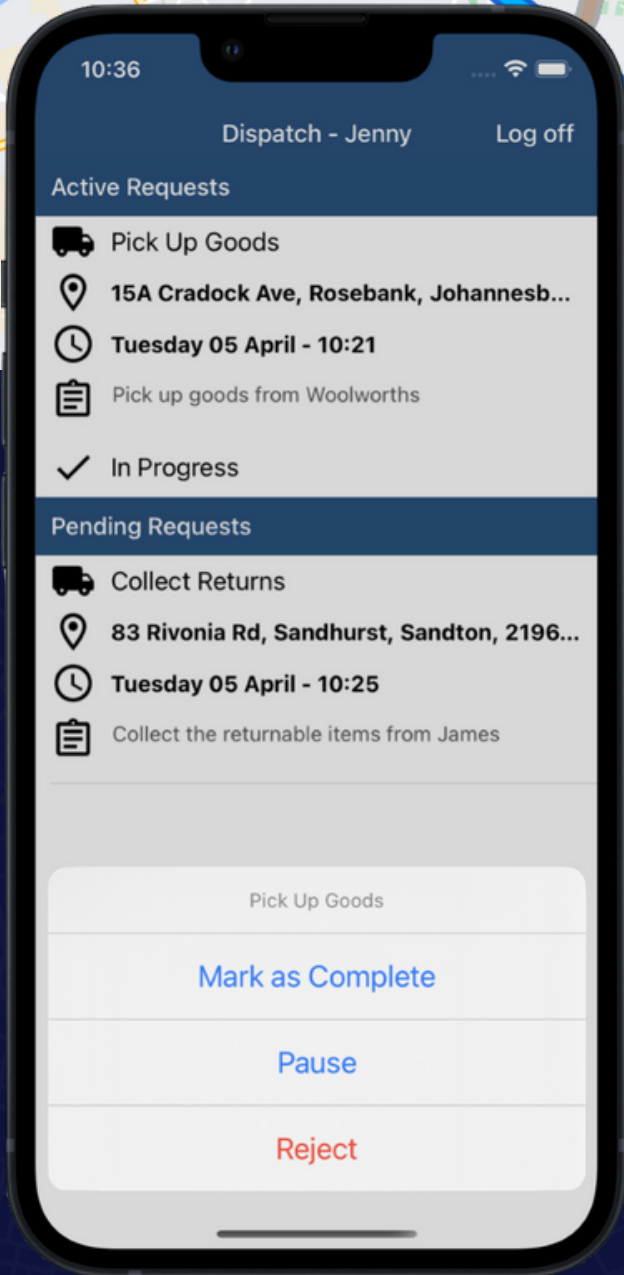

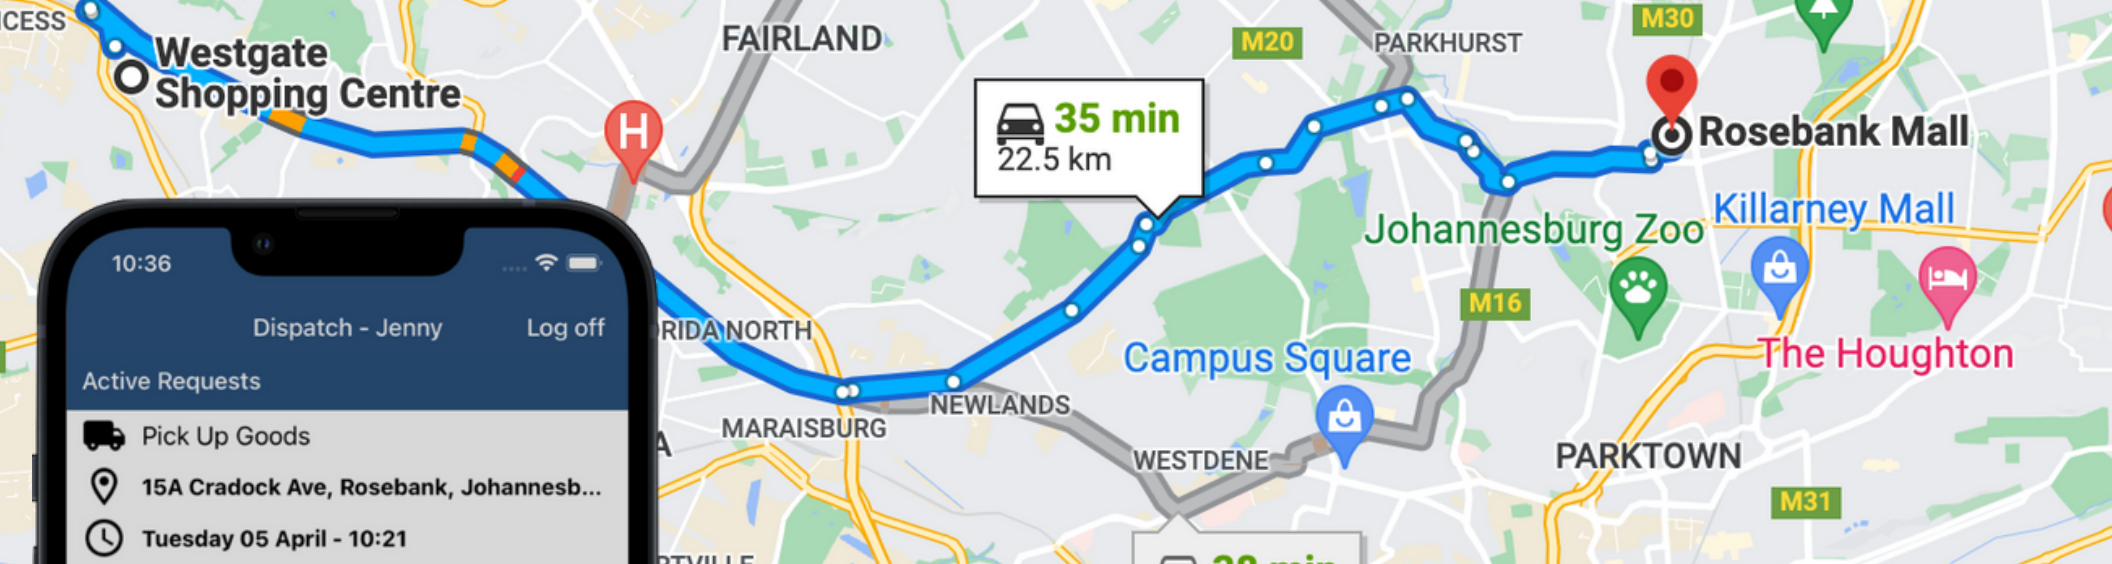

## ■ Receive

Dispatch requests are received in the form of push notifications on the Telematics Guru mobile app. The driver can accept, pause, or reject the dispatch request and, if accepted, begin navigating to the assigned destination.

## ■ Deliver

Once the delivery or job is complete, the driver marks the dispatch as completed and can continue with additional dispatches or sign out.

# Industries

Destination Dispatching can be used in a variety of industries to streamline delivery management and driver dispatching.

**Services and Trades** - Technicians, Installers, Plumbers, Electrical

**Transport, Freight and Logistics**

**Courier Services**

**Delivery Management Services** - Grocery, Food, Retail

# Benefits

- Distribute work across your field teams faster and more effectively

- Increases driver productivity and boosts profitability

- Offers full visibility into driver locations, delivery times, and routes

- Monitor driver behaviour (speeding, idling, braking, and more) and implement preventative maintenance monitoring

- Eliminates need for manual paperwork

- Reduces carbon footprint by optimizing communications and routes with drivers
